

Job Corps carpentry students make kits for kids

Production and precision are the classroom focal points taught by Don Whitney and Edgar Hernandez in the carpentry shop at Denison Job Corps. The students have been busy, meticulously cutting the six pieces of different sizes for the bird-houses and the five pieces used to make a picture frame. Among other tools, the students became quite familiar with the miter saws and the drill presses, completing nearly 1,000 pieces. These items will be delivered to the United Brotherhood of Carpenters' Union hall in Omaha, Nebraska. Once a month, on Saturdays, children are welcomed to come by, build a project and take their masterpiece home when they leave. Learning and learning again while building necessary skills for a career path is fun with this kind of project. Pictured, Levi Noah, above, and Bryce Quaites, right, work on the projects.
